

Pro-create - Savage 3.0

(304 Elizabeth St, North Hobart)

This old Hobart Hotel was fully gutted and remodelled internally to a state-of-the-art building for world leading app designers "Pro-create", after the builders had done an amazing job of removing the interior + the rear courtyards. Also including is a commercial kitchen and fulltime barista to cater for the think tanks and many staff, which they wanted us to make it look industrial and retro at the same time. The original interior brickwork was retained after removing the old lard, it was acid washed and finished in two pack urethane clear, some of the upper building original timber floors were drum sanded and hand stained (our own mix) to create an old stressed look, the rendered walls were all finished with a marble coat in domino's and lexicon's and the beautiful steel work was all finished with Jotun 2 pack in black. The colours from domino and enigma ceilings and walls following into 1/4 strength lexicons with their red fluoro strip lights are very effective, one happy client!

All Haymes products were used in this project,

This job came to a total of \$144,698.00

*The front of house gets very dirty very quickly being finished in domino and being next to a busy road, so please excuse the photos of the exterior
